Introduction

4

New Loops presents Sub and Vowel Bass – an earth-shaking collection of 100 bass sounds suitable for any genre of electronic music. You'll find 60 deep sub basses that fill out the low end, and 40 vowel and formant basses for a modern sound.

We've recorded some of the best sounds from our preset packs and put them inside Native Instruments Kontakt to create this collection of bass instruments. There's a custom GUI with 5 knobs for controlling the sound.

Please note: these bass patches are not multi-sampled instruments and therefore have a limited range which is best played within an octave of the original sample.

Installation

5

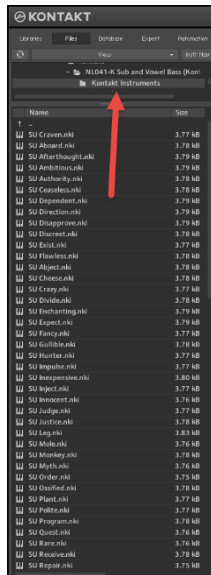

Installing this sound pack is easy. Simply download the zip file and unpack. You can then move the entire folder to your preferred place on your hard disk.

You'll find the patches in the **Kontakt Instruments** folder. You can use Kontakt's file browser to locate the patches or drag and drop patches from the folder onto Kontakt.

Requirements: Requires Native Instruments Kontakt 5.8.1 or later.

Please note: These audio files are in wav format and are available to use in any audio software and hardware that supports the standard wav format. You can find them in the **Samples** folder.

Please keep a backup copy of your sound pack.

New Loops Sub and Vowel bass for Kontakt features a custom user interface with 5 knobs. These are Reso, Cutoff, Distortion, Chorus, and Speed.

Here's what each knob does:

- Reso - controls the filter resonance amount
- Cutoff - controls the lowpass filter cutoff frequency
- Distortion – adds tube distortion effect
- Chorus - adds chorus effect (adds stereo width)
- Speed - changes the chorus speed

Tip: For some looping sounds, try changing the sampler mode to one of the “Time Machine” modes and automate the speed.

Tip: Turn up the resonance and distortion knobs and play with the cutoff for some aggressive, acid style timbres! Try mapping the mod wheel or aftertouch to the filter or distortion.

New Loops

7

New Loops is an English sound design label publishing audio sample packs and synthesiser presets in the pro audio market. With a focus on quality and usability, New Loops sounds are used by DJs, producers, music studios, and composers all over the world.
