Here my Contribution to KVR-DC 2014:  
**MORMOX IMITATE**  
an 3 OSCILATOR-SYNTH-MODULE

#### Overview:

Its an „Emulation“ of a very new Hardware-synth from Greece, called „Murmux Initate“ And it has a very „simple“ Structure: 2 Oscillators with Subosc, 2 waves (Saw and Pulse) Lowpass-Filter, simple LFO, 2 Envelopes (one AD, one ADSR)... thats all My „Emu“ has some extra Features, indeed, i have tried to receive the brilliantly easy structure.

#### Details:

- > 2 OSC with Saw and Pulse, 2 Octave Tuner-knobs and FM-Modulation (Osc1 > Cutoff)
- > Suboscillator (one Octave lower as Osc1) with Pulsewave
- > Combined Lowpass-Bandpass-Filter with Cutoff and Resonance and ADSR EG
- > LFO with Rate and Depth Potis for Oscillator or Cutoff Modulations
- > Special ADSR EG with embedded LFO/Loop (Ramp and S/H waves), the Sustain-poti regulates the intensity. Targets are the Amplifier, Oscillator Tuning or Cutoff !
- > Delaysection with Pan-Lfo > Glide and > warm Shaper/Overdrive
- > Monofon and only 18 Patches at moment, Sorry but my time did not reach for more.
- > Maybe at an Update after the DC ;)

Midi CC 's see „MidiCC.text“

Greetings to all Develers and Good Luck !!!

MORMOX IMITATE

is produced with the fascinating SynthEdit from Jeff McClintock  
Many thanks for Your work !!

Requirements:

VST-compatible Host-Sequencer

Windows 98/ME/XP/7/8

Copy Mormox Imitate.dll-file in the  
VST-Folder

VST and Cubase is a Trademark from Steinberg AG !!
